

1.19 understand the term molar volume of a gas and use its values (24 dm^3 and $24,000\text{ cm}^3$) at room temperature and pressure (rtp) in calculations.

e) Chemical formulae and chemical equations

Students will be assessed on their ability to:

- 1.20 write word equations and balanced chemical equations to represent the reactions studied in this specification
- 1.21 use the state symbols (s), (l), (g) and (aq) in chemical equations to represent solids, liquids, gases and aqueous solutions respectively
- 1.22 understand how the formulae of simple compounds can be obtained experimentally, including metal oxides, water and salts containing water of crystallisation
- 1.23 calculate empirical and molecular formulae from experimental data
- 1.24 calculate reacting masses using experimental data and chemical equations
