

(a) Group 1 (alkali metals) – lithium, sodium and potassium	
Students should:	
2.1	understand how the similarities in the reactions of these elements with water provide evidence for their recognition as a family of elements
2.2	understand how the differences between the reactions of these elements with air and water provide evidence for the trend in reactivity in Group 1
2.3	use knowledge of trends in Group 1 to predict the properties of other alkali metals
2.4C	explain the trend in reactivity in Group 1 in terms of electronic configurations
