

3.3 Graphs	interpret information presented in a range of linear and non-linear graphs understand and use conventions for rectangular cartesian coordinates plot points (x, y) in any of the four quadrants locate points with given coordinates determine the coordinates of points identified by geometrical information determine the coordinates of the midpoint of a line segment, given the coordinates of the two end points draw and interpret straight line conversion graphs find the gradient of a straight line recognise that equations of the form $y = mx + c$ are straight line graphs generate points and plot graphs of linear and quadratic functions	To include speed/time and distance/time graphs To include currency conversion graphs A ramp rises 15 m over a horizontal distance of 60 m, therefore the gradient of the ramp is $15/60 = 0.25$ To include $x = k$, $y = c$, $y = x$, $y - x = 0$ Including completion of values in tables and equations of the form $ax + by = c$
