

4. Exponentials and logarithms

What students need to learn:

The function e^x and its graph.

To include the graph of $y = e^{ax+b} + c$.

The function $\ln x$ and its graph; $\ln x$ as the inverse function of e^x .

Solution of equations of the form $e^{ax+b} = p$ and $\ln(ax+b) = q$ is expected.
