

2. Algebra and functions		
2.1	Simple algebraic division; use of the Factor Theorem and the Remainder Theorem.	Only division by $(ax + b)$ or $(ax - b)$ will be required, e.g. students should know that if $f(x) = 0$ when $x = \frac{b}{a}$, then $(ax - b)$ is a factor of $f(x)$. Students may be required to factorise cubic expressions such as $x^3 + 3x^2 - 4$ and $6x^3 + 11x^2 - x - 6$. Students should be familiar with the terms ‘quotient’ and ‘remainder’ and be able to determine the remainder when the polynomial $f(x)$ is divided by $(ax + b)$.
