

5. Exponentials and logarithms		
5.1	$y = a^x$ and its graph.	$a > 0, a \neq 1$
5.2	Laws of logarithms.	To include $\log_a(xy) \equiv \log_a x + \log_a y,$ $\log_a\left(\frac{x}{y}\right) \equiv \log_a x - \log_a y,$ $\log_a(x^k) \equiv k \log_a x,$ $\log_a\left(\frac{1}{x}\right) \equiv -\log_a x,$ $\log_a a = 1$ where $a, x, y > 0, a \neq 1$.
5.3	The solution of equations of the form $a^x = b$.	Students may use the change of base formula.
