

6. Numerical methods		
6.1	Location of roots of $f(x) = 0$ by considering changes of sign of $f(x)$ in an interval of x in which $f(x)$ is continuous.	
6.2	Approximate solution of equations using simple iterative methods, including recurrence relations of the form $x_{n+1} = f(x_n)$	Solution of equations by use of iterative procedures, for which leads will be given.
