

2. Centres of mass		
2.1	Centre of mass of a discrete mass distribution in one and two dimensions.	
2.2	Centre of mass of uniform plane figures, and simple cases of composite plane figures.	The use of an axis of symmetry will be acceptable where appropriate. Use of integration is not required. Figures may include the shapes referred to in the formulae book. Results given in the formulae book may be quoted without proof.
2.3	Simple cases of equilibrium of a plane lamina.	The lamina may (i) be suspended from a fixed point; (ii) be free to rotate about a fixed horizontal axis; (iii) be put on an inclined plane.
