

Topic 21: Chemical reactions – More on combustion

Students should:		Guidance <i>iLowerSecondary Curriculum reference</i>
21.1	know about an experiment to show the products of combustion of a hydrocarbon	for example, burning a candle <i>Year 8: Chemical reactions – More on combustion</i>
21.2	know about a test for the presence of water using anhydrous copper(II) sulfate	<i>Year 8: Chemical reactions – More on combustion</i>
21.3	know about a test for the presence of carbon dioxide using limewater	<i>Year 8: Chemical reactions – More on combustion</i>
21.4	know how air pollution may be caused by the combustion of sulfur and the complete/incomplete combustion of carbon in fossil fuels	for example, formation of soot, carbon monoxide, carbon dioxide and sulfur dioxide <i>Year 8: Chemical reactions – More on combustion</i>
21.5	know the environmental problems caused by air pollution and ways of reducing them	carbon dioxide is a greenhouse gas and increasing amounts in the atmosphere may contribute to climate change sulfur dioxide is an acidic gas that dissolves in moisture in the air to form acid rain that can harm vegetation, aquatic life and buildings <i>Year 8: Chemical reactions – More on combustion</i>
