

5.1.3 Gene technologies

Learning outcomes	Additional guidance
<i>Learners should be able to demonstrate and apply their knowledge and understanding of:</i>	
(a) post transcriptional editing of mRNA	To include the production of mature mRNA in human cells, the nature of introns and exons and the potential to produce many different mature RNA molecules from a single gene (details of splicing mechanisms not required). HSW7, HSW9
(b) the use of genetic modification of bacterial cells to produce some human proteins	To include the role of reverse transcriptase, restriction enzymes, DNA ligase and plasmid vectors AND the palindromic nature of recognition sequences for restriction enzymes AND the need for reporter genes on plasmids such as those for antibiotic resistance AND example of human protein to include insulin. HSW1, HSW3, HSW5, HSW6, HSW7, HSW9, HSW10, HSW11, HSW12
(c) the principles and uses of the Polymerase Chain Reaction (PCR)	To include the use of PCR in amplifying DNA, the role of primers and Taq polymerase in PCR AND the use of log scales to show the relationship between cycles of heating and cooling and increases in copy number. M0.5, M2.5 HSW1, HSW2, HSW3, HSW5, HSW6, HSW7, HSW9, HSW11

(d) the principles and uses of agarose gel electrophoresis

PAG6

(e) the nature and use of haplotypes, SNPs (single nucleotide polymorphisms) and VNTRs (variable number tandem repeats) in human genome studies

To include forensics, disease pre-disposition, ethnic migration, paternity testing, selection for clinical trials.
HSW2, HSW5, HSW6, HSW9, HSW10, HSW11, HSW12

(f) the use of genetic engineering in eukaryotic cells

To include an outline of the use of genetic engineering to develop knockout mice as models for studying mammalian diseases (no details of genetic crossing to obtain homozygous individuals are required)

AND

an outline of the use of genetic engineering to produce human proteins in animals and genetically modified crops.

HSW9, HSW12

(g) somatic and germ line gene therapy

To include the differences between the two forms of gene therapy

AND

the ethical implications of gene therapy in disease treatment to include the treatment of cystic fibrosis and SCID (severe combined immunodeficiency disease).

HSW9, HSW10, HSW11

(h) the principles of RNA interference.

To include in outline only the action of siRNA and miRNA and the potential of RNA interference in disease treatment.
HSW9, HSW10, HSW11, HSW12
