

6.2.3 Polyesters and polyamides

Learning outcomes	Additional guidance
<i>Learners should be able to demonstrate and apply their knowledge and understanding of:</i>	
Condensation polymers	
(a) condensation polymerisation to form: (i) polyesters (ii) polyamides	Formation from carboxylic acids/dicarboxylic acids (or respective acyl chlorides) and from alcohols/diols or amines/diamines. Learners will not be expected to recall the structures of synthetic polyesters and polyamides or their monomers.
(b) the acid and base hydrolysis of: (i) the ester groups in polyesters (ii) the amide groups in polyamides	
(c) prediction from addition and condensation polymerisation of: (i) the repeat unit from a given monomer(s) (ii) the monomer(s) required for a given section of a polymer molecule (iii) the type of polymerisation.	See also 4.1.3 j.
