

The specification has been designed to be co-teachable
with the standalone AS Level Chemistry B (Salters)

Section 2e – Chemical literacy

Assessment of practical skills and the Practical Endorsement

Section 2c of the specification content relates to the practical skills learners are expected to gain throughout the course, which are assessed throughout the written examinations and also through the Practical Endorsement (see Section 5).

Practical activities are embedded within the learning outcomes in the teaching modules in Section 2d (Storylines). Suggestions for practical work are also highlighted in the additional guidance (*italics*) to encourage practical activities in the laboratory which contribute to the achievement of the Practical

Endorsement (see Section 5h) as well as enhancing learners' understanding of chemical theory and practical skills.

Opportunities for carrying out activities that could count towards the Practical Endorsement are indicated throughout the specification. These are shown in the additional guidance column as **PAG1** to **PAG11** (Practical Activity Group, see Section 5h). There are a wide variety of opportunities to assess **PAG12** throughout the qualification.

Assessment of chemical literacy

Section 2e of the specification content relates to the chemical literacy skills learners are expected to gain throughout the course. These skills will be assessed throughout the written examinations. Learners will be expected to demonstrate the ability to extract and use data and information from sources, including those set in unfamiliar contexts. Additionally, learners should be able to demonstrate the understanding through appropriate written communication.

Opportunities to develop chemical literacy skills exist throughout the course. Development of these skills should feature in the teaching and learning of all areas of the specification.
