

| <b>3.2 Design of the solution (15 marks)</b> |                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3.2.1 Decompose the problem                  | (a) Break down the problem into smaller parts suitable for computational solutions justifying any decisions made.                                                                                                                                                                                                                                                        |
| 3.2.2 Describe the solution                  | (a) Explain and justify the structure of the solution.<br>(b) Describe the parts of the solution using algorithms justifying how these algorithms form a complete solution to the problem.<br>(c) Describe usability features to be included in the solution.<br>(d) Identify key variables / data structures / classes justifying choices and any necessary validation. |
| 3.2.3 Describe the approach to testing       | (a) Identify the test data to be used during the iterative development and post development phases and justify the choice of this test data.                                                                                                                                                                                                                             |
