

7.1 How can materials and processes be used to make iterative models?

- | | | |
|----|--|--|
| a. | Understand that 3D iterative models can be made from a range of materials and components to create block models and working prototypes to communicate and test ideas, moving parts and structural integrity. | |
| b. | Demonstrate an understanding of simple processes that can be used to model ideas using hand tools and digital tools such as rapid prototyping, or digital simulation packages to support the creation of iterative developments. | |
