

4.04 Further Vectors

Vector equations of lines and planes are studied; methods for finding angles and distances between points, lines and planes are developed. Scalar and vector products are introduced, and used in a variety of geometrical problems. How planes intersect in 3-D space is considered, and matrices are used to find the point(s) of intersection.

assessed where it appears in this specification.

Use of technology

To support the teaching and learning of mathematics using technology, we suggest that the following activities are carried out through the course:

1. Graphing tools: Learners could use graphing
