

7.04 Network Algorithms

Problems involving networks are introduced: shortest path; minimum connector; travelling salesperson and route inspection.

Standard network algorithms are studied and used to solve these problems.

The Formulae Booklet contains sketches of some of the algorithms found in this area. The focus of the study of algorithms in this area should be on understanding the theory and processes, not on memorisation or practising the rote application of algorithms by hand. In the classroom, technology should be used to demonstrate the power of these
