

2c. Content of Physical systems (H481/01)

The Physical systems (01) component is built around two main topics, Landscape Systems and Earth's Life Support Systems. Learners will explore **one** chosen landscape from three options, coastal landscapes, glaciated landscapes and dryland landscapes, as well as the carbon and water cycles in a systems framework.

The inter-relationships between the land, oceans and atmosphere help learners to understand the processes, characteristics and impacts on these

landscapes and cycles, which shape them over time and create a number of issues when attempting to manage them.

Learners will investigate examples and case studies at a range of scales to understand the dynamic nature of landscapes and the water and carbon cycles. Quantitative and qualitative fieldwork opportunities present themselves within this component, within helping learners to generate new knowledge and understanding about the real world.
