

2c. Content of Geographical debates (H481/03)

Geographical debates (03) takes some of the most dynamic issues the planet faces and encourages learners to engage with, reflect on and think critically about them. Learners will gain a deep understanding of their **two** chosen topics, exploring the interactions between people and the environment.

Each topic engages learners through an enquiry approach which enables them to articulate opinions

and provide evidenced arguments across a range of situations. The concepts of inequality, mitigation and adaptation, sustainability, risk, resilience and threshold underpin the Geographical debates component.

There are five topic options for learners to choose from in the Geographical debates (03) component. Learners must choose **two** options out of the five.
