

Section 2: Data, information collection methods and sampling framework. (7 marks)

Level 3	5–7 marks • There is good knowledge and understanding of a range of data collection methodologies, including suitable quantitative and/or qualitative approaches, which are justified with limitations outlined, appropriate to the investigation and explained in detail. • There is clear evidence of personalised methodologies and approaches to observe and record primary data and phenomena in the field and to incorporate secondary data and/or evidence, collected individually or in groups. • There is clear evidence of the ability to collect and use digital, geo-located data. • The data design framework (sampling, frequency, range and location choice) is appropriate, coherent and justified. • Addresses and shows an understanding of the ethical and socio-political dimensions of the methodologies chosen.
Level 2	3–4 marks • There is some knowledge and understanding of a range of data collection methodologies, including both quantitative and/or qualitative approaches, which are partially justified with some limitations outlined, mostly appropriate to the investigation with some explanation. • There is limited evidence of personalised methodologies and approaches to observe and record primary data and phenomena in the field and to incorporate secondary data and/or evidence, collected individually or in groups. • There is limited evidence of the ability to collect and use digital, geo-located data. • The data design framework (sampling, frequency, range and location choice) is mostly appropriate but with limited justification. • Attempts to address and show an understanding of the ethical and socio-political dimensions of the methodologies chosen.
Level 1	1–2 marks • There is limited knowledge and understanding of data collection methodologies which are sometimes appropriate but lack explanation. • There is little or no evidence of personalised methodologies and approaches to observe and record primary data and phenomena in the field and/or incorporate secondary data and/or evidence, collected individually or in groups. • There is little or no evidence of the ability to collect and use digital, geo-located data. • The data design framework (sampling, frequency, range and location choice) is weak or absent and with no relevant justification. • Makes no attempt to address or understand the ethical and socio-political dimensions of the methodologies chosen.
0 marks	• No response or no response worthy of credit.
