

4.8.1 Rationale

The requirements of the following units include a single piece of coursework, which will count for 20% of the assessment of the unit:

C3, Methods for Advanced Mathematics

DE, Differential Equations

NM, Numerical Methods.

In each case the coursework covers particular skills or topics that are, by their nature, unsuitable for assessment within a timed examination but are nonetheless important aspects of their modules.

The work undertaken in coursework is thus of a different kind from that experienced in examinations. As a result of the coursework, students should gain better understanding of how mathematics is applied in real-life situations.
