

1.1.d. Environmental effects on body systems

Learners will develop their knowledge and understanding of the effect of altitude on the cardiovascular and respiratory systems and the performance of exercise at different intensities at altitude. Knowledge of acclimatisation will also be developed.

Learners will develop their knowledge and understanding of exercise in the heat and recognise the effect of heat on the cardiovascular and respiratory systems. The understanding of the performance of exercise of different intensities in the heat will also be developed in this topic.

Topic Area	Content
*Exercise at altitude  	• effect of altitude on the cardiovascular and respiratory systems: ◦ reduced arterial PO_2 (partial pressure of oxygen) leading to impaired muscle O_2 delivery ◦ elevated heart rate and ventilation • acclimatisation, including the importance of timing arrival, at altitude (above 2400m).
*Exercise in the heat  	• effect of heat on the cardiovascular and respiratory systems: ◦ temperature regulation ◦ cardiovascular drift.
