

2.1.2 S.I. units

Learning outcomes	Additional guidance
<i>Learners should be able to demonstrate and apply their knowledge and understanding of:</i>	
(a) Système Internationale (S.I.) base quantities and their units - mass (kg), length (m), time (s), current (A), temperature (K), amount of substance (mol)	Examples: momentum $\rightarrow \text{kg m s}^{-1}$ and density $\rightarrow \text{kg m}^{-3}$
(b) derived units of S.I. base units	
(c) units listed in this specification	
(d) checking the homogeneity of physical equations using S.I. base units	As set out in the ASE publication <i>Signs, Symbols and Systematics (The ASE Companion to 16–19 Science, 2000)</i> .
(e) prefixes and their symbols to indicate decimal submultiples or multiples of units – pico (p), nano (n), micro (μ), milli (m), centi (c), deci (d), kilo (k), mega (M), giga (G), tera (T)	As set out in above, e.g. speed / m s^{-1} .
(f) the conventions used for labelling graph axes and table columns.
