

2.1 Techniques to obtain, create and manage assets

Visual animation assets

- Techniques and tools used to create digital visual animation assets
 - image editing software tools
 - animation software tools
 - exporting, saving and asset management
- Techniques used to create, import/digitise and edit non-digital or physical visual animation assets
- Creating physical sets, objects and characters and lighting them effectively
 - scanning
 - photography
 - video
 - export, save and asset management

To include:

- Using drawing and editing tools to create objects, characters and backgrounds, using image editing and/or animation software and saving them ready for use
- Using group elements together or breaking elements apart before creating movement
- Naming, saving and organising assets within libraries in animation software and/or in folders outside the animation software
- Organising and preparing pre-made assets from libraries within animation software
- Creating models or sets ready to animate, using lighting (inbuilt flash or external light sources) to make sure subjects and objects are effectively lit
- Setting up fixed camera viewpoints using camera, tripod and marks to ensure continuity
- Using techniques for digitising hand drawn/cel drawn and stop-motion footage using scanners, cameras and video cameras, selecting appropriate settings to digitise images at the required resolution and colour depth, which cameras support time-lapse frame capture
- Saving digitised visual content in a format which is compatible with animation software

Audio animation assets

- Techniques used to record and source audio assets
 - recording techniques
 - libraries
 - saving and asset management
- Techniques used to import/digitise and edit audio assets
 - importing, trimming, editing, mixing and enhancing sounds in audio editing software
 - exporting and asset management

To include:

- Using techniques for creating sounds e.g. recording using appropriate equipment
- Minimising extraneous/unwanted noise when recording live sound
- Locating and using libraries and stock sounds, music and sound effects when identifying and selecting pre-made audio content
- Saving audio assets using suitable file formats which are compatible with audio editing software
- Editing sounds in audio editing software using fade, gain, filter, noise removal, pitch, equalisation, inversion and effects tools
- Exporting audio assets using suitable file formats which are suitable for use within animation software

Unit R096: Animation with audio

Does not include:

- Recording complete music tracks, orchestration, MIDI synthesis of scores
- Comparison or investigation of different audio recording equipment e.g. microphone types and recording devices
- Setting up or using a sound-proof recording studio/sound booth
