

TECHNICAL PRINCIPLES	iii. mechanisms.	
	6.3 How do we introduce controlled movement to products and systems?	
	a. An overview of different sorts of movement and types of motion, including: i. rotary ii. linear iii. oscillating iv. reciprocating.	✓ 
	b. The effect of forces on the ease of movement, including: i. load ii. effort iii. fulcrum.	✓ 
	c. How different mechanical devices are used to change the magnitude and direction of motion or forces, including consideration of: i. cams ii. gears iii. pulleys and belts iv. levers and linkages.	✓
