

Explore (AO1)

Exploring is about systematically understanding the need(s), known as requirements, of the stakeholder(s). The requirements should be described in a way that stimulates the 'create' stage of design development and forms the basis of measurable evaluation criteria in the 'evaluation' stage of the process. The requirements can be derived by exploring the following questions:

- *Who* are the stakeholders? e.g. using personas.
- *What* do stakeholders do and *when* do they do it? e.g. using task analysis.
- *Where* do stakeholders do it? e.g. through primary and secondary research that helps understand the physical, organisational, social and cultural environments.
- *Why* do stakeholders do what they do? e.g. establishing what stakeholders want to achieve.
- What is the impact of what stakeholders do on society (people), the environment (planet) and economics (profit)?
