

6.2.1 Amines

Learning outcomes	Additional guidance
<i>Learners should be able to demonstrate and apply their knowledge and understanding of:</i>	
Basicity and preparation of amines	
(a) the basicity of amines in terms of proton acceptance by the nitrogen lone pair and the reactions of amines with dilute acids, e.g. HCl(aq) , to form salts	Comparison of basicity of different amines not required. Restricted to inorganic acids.

(b) the preparation of:

- (i)** aliphatic amines by substitution of haloalkanes with excess ethanolic ammonia and amines
- (ii)** aromatic amines by reduction of nitroarenes using tin and concentrated hydrochloric acid.

Including formation of primary amines from ammonia and secondary/tertiary amines from amines.
See also reduction of nitriles (**see 6.2.4 c**).
