

2d. Prior learning and progression

Learners in England who are beginning an A level course are likely to have followed a Key Stage 4 programme of study. This course will enable learners to progress to higher study or to progress directly to employment.

There are no prior qualification requirements for this specification.

If learners wish to progress to higher education many universities now recognise the value of an A level qualification in Computer Science. Learners could then go on to a career in Medicine, Law, Business, Engineering or any of the Sciences.

It will provide learners with a range of transferable skills which will facilitate personal growth and foster cross curriculum links in areas such as maths, science and design and technology. Computer Science is a very creative subject and skills such as problem solving and analytical thinking will all be refined and explored as learners progress through the learning and assessment programme.

There are a number of Computer Science specifications at OCR. Find out more at www.ocr.org.uk
