| DESIGNING & MAKING<br>PRINCIPLES | <b>4.3 How do product designers use different approaches to design thinking to support the development of design ideas?</b>                                                                                                                                                              |  |
|                                  | a. Awareness of different strategies, techniques and approaches to explore, create and evaluate design ideas, including: <ul style="list-style-type: none"> <li>• iterative designing</li> <li>• user-centred design</li> <li>• circular economy</li> <li>• systems thinking.</li> </ul> |  |
|                                  | b. The importance of collaboration to gain specialist knowledge from across subject areas when delivering solutions in the design and manufacturing industries.                                                                                                                          |  |

## 5. Material and component considerations
