

5.2 What materials should be selected when designing and manufacturing products and prototypes in product design?

- a. Understand that most products consist of multiple materials and that product designers are required to discriminate between them appropriately for their use, including:
- i. hardwoods and softwoods, such as:
 - oak, teak and beech; pine, spruce and fir
 - ii. manufactured boards, such as:
 - plywood, MDF and block board
 - iii. ferrous and non-ferrous metals, such as:
 - cast iron, mild steel and stainless steel; aluminum and copper
 - iv. metal alloys, such as:
 - brass, bronze and tungsten
 - v. thermopolymers and thermosetting polymers, such as:
 - PET, HDPE, PVC, LDPE, polypropylene, polystyrene and ABS; urea formaldehyde, epoxy resin and polyester resin.
 - vi. natural and synthetic fibres, such as:
 - cotton, wool and silk; polyester and nylon
 - vii. textile fabrics, such as:
 - woven, non-woven, knitted and blended textiles
 - viii. composite materials, such as:
 - fibre-reinforced plastics, glass-reinforced plastics (GRP) and carbon fibre (CFRP)
 - ix. modern materials, such as:
 - e-textiles, super-alloys, graphene, bioplastics and nanomaterials
 - x. smart materials, such as:
 - thermochromic, photochromic and electrochromic materials; shape memory alloy and shape memory polymers; conductive paints and e-textiles.
