

5.09 Linear Regression

5.09a	Dependent and independent variables	a) Understand the difference between an independent (or controlled) variable and a dependent (or response) variable. <i>Includes appreciating that, in a given situation, neither parameter may be independent.</i>	
5.09b 5.09c 5.09d	Calculation of the equation of the regression line	b) Understand the concepts of least squares and regression lines in the context of a scatter diagram. c) Be able to calculate, both from raw data and from summarised data, the equation of the regression line of y on x , where the independent variable (if any) is x . <i>[The regression line of x on y is excluded in the case when x is independent.]</i> d) Understand the effect on a regression line of linear coding on one or both variables.	
5.09e	Use of the regression line	e) Be able to use, in the context of a problem, the regression line of y on x to estimate a value of y , and be able to interpret in context the uncertainties of such an estimate.
