

2c. Content of Physiological factors affecting performance (H555/01)

Component 01, Physiological factors affecting performance, focuses on developing the learner's knowledge of the science behind physical activity. This includes the structure and function of key systems in the human body, the forces that act upon us and the adaptations we make to our bodies through diet and training regimes.

Through the study of this component, learners will gain a deeper understanding of key systems in the body and how they react to changes in diet and exercise. They will also study the effects of force and motion on the body and how these effects can be used in physical activities to our advantage.

This topic focuses on key systems of the human body involved in movement and physical activity.

Learners will develop their knowledge and understanding of the changes within these body systems prior to exercise, during exercise of differing intensities and during recovery.

Learners will know and understand the different energy systems and factors that affect the interplay of the energy systems during physical activity.

Application of this theoretical knowledge will enable learners to understand how changes in physiological states can influence performance in physical activities and sport.
