

1.2.c. Injury prevention and the rehabilitation of injury

Learners will develop their knowledge and understanding of acute and chronic injuries related to physical activities and sports. The prevention of injury will also be known by understanding the risk factors and the relative value of warm up and cool down routines used in physical activities and sports.

Learners will develop their knowledge and understanding of how we might respond to injuries and medical conditions in a sporting context. Rehabilitation of injury will be understood by knowing about common sports injuries and common treatments.

Topic Area	Content
*Acute and chronic injuries 	• acute injuries resulting from a sudden stress to the body: ◦ hard tissue injuries ◦ soft tissue injuries ◦ concussion • chronic injuries resulting from continuous stress to the body: ◦ soft tissue injuries ◦ hard tissue injuries.
*Injury prevention 	• intrinsic risk factors: ◦ individual variables ◦ training effects • extrinsic risk factors: ◦ poor technique/training ◦ incorrect equipment/clothing ◦ inappropriate intensity, duration or frequency of activity • debate surrounding effective warm up and cool down.
*Responding to injuries and medical conditions in a sporting context 	• assessing sporting injuries using 'SALTAPS' ◦ See ◦ Ask ◦ Look ◦ Touch ◦ Active ◦ Passive ◦ Strength • acute management of soft tissue injuries using 'PRICE' ◦ Protection ◦ Rest ◦ Ice ◦ Compression ◦ Elevation • recognising concussion: IRB's 'Recognise and Remove' 6 R's ◦ Recognise ◦ Remove ◦ Refer ◦ Rest ◦ Recover ◦ Return.
*Rehabilitation of injury 	• treatment of common sporting injuries: ◦ injuries: – fractures – simple, stress – joint injuries – dislocation, sprain, torn cartilage – exercise-induced muscle damage ◦ treatments: – stretching – massage – heat, cold and contrast therapies – anti-inflammatory drugs – physiotherapy – surgery.
