

4.4.1 Wave motion

Learning outcomes		Additional guidance
<i>Learners should be able to demonstrate and apply their knowledge and understanding of:</i>		
(a)	progressive waves; longitudinal and transverse waves	HSW8
(b)	(i) displacement, amplitude, wavelength, period, phase difference, frequency and speed of a wave	HSW8
	(ii) techniques and procedures used to use an oscilloscope to determine frequency	PAG5
(c)	the equation $f = \frac{1}{T}$	
(d)	the wave equation $v = f\lambda$	

- | | |
|---|--|
| <p>(e) graphical representations of transverse and longitudinal waves</p> | <p>HSW5</p> |
| <p>(f) (i) reflection, refraction, polarisation and diffraction of all waves</p> | <p>Learners will be expected to know that diffraction effects become significant when the wavelength is comparable to the gap width.</p> |
| <p> (ii) techniques and procedures used to demonstrate wave effects using a ripple tank</p> | <p>HSW1, 4</p> |
| <p> (iii) techniques and procedures used to observe polarising effects using microwaves and light</p> | <p>PAG5</p> |
| <p>(g) intensity of a progressive wave; $I = \frac{P}{A}$;
 intensity $\propto$ (amplitude)².</p> | |
