

### 6.4.2 Fundamental particles

| Learning outcomes                                                                                                                                               | Additional guidance |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <i>Learners should be able to demonstrate and apply their knowledge and understanding of:</i>                                                                   |                     |
| (a) particles and antiparticles; electron–positron, proton-antiproton, neutron-antineutron and neutrino-antineutrino                                            | HSW7, 9             |
| (b) particle and its corresponding antiparticle have same mass; electron and positron have opposite charge; proton and antiproton have opposite charge          |                     |
| (c) classification of hadrons; proton and neutron as examples of hadrons; all hadrons are subject to both the strong nuclear force and the weak nuclear force   |                     |
| (d) classification of leptons; electron and neutrino as examples of leptons; all leptons are subject to the weak nuclear force but not the strong nuclear force | HSW7, 9             |

- (e) simple quark model of hadrons in terms of up (u), down (d) and strange (s) quarks and their respective anti-quarks
- (f) quark model of the proton (uud) and the neutron (udd)
- (g) charges of the up (u), down (d), strange (s), anti-up ( $\bar{u}$ ), anti-down ( $\bar{d}$ ) and the anti-strange ( $\bar{s}$ ) quarks as fractions of the elementary charge  $e$
- (h) beta-minus ( $\beta^-$ ) decay; beta-plus ( $\beta^+$ ) decay
- (i)  $\beta^-$  decay in terms of a quark model;  

$$d \rightarrow u + {}_{-1}^0e + \bar{\nu}$$
- (j)  $\beta^+$  decay in terms of a quark model;  

$$u \rightarrow d + {}_{+1}^0e + \nu$$
- (k) balancing of quark transformation equations in terms of charge
- (l) decay of particles in terms of the quark model.
