

4.4.2 Electromagnetic waves

Learning outcomes	Additional guidance
<i>Learners should be able to demonstrate and apply their knowledge and understanding of:</i>	
(a) electromagnetic spectrum; properties of electromagnetic waves	Learners will be expected to know about polarising filters for light and metal grilles for microwaves in demonstrating polarisation.
(b) orders of magnitude of wavelengths of the principal radiations from radio waves to gamma rays	
(c) plane polarised waves; polarisation of electromagnetic waves	
(d) (i) refraction of light; refractive index; $n = \frac{c}{v}$; $n \sin \theta = \text{constant}$ at a boundary where θ is the angle to the normal (ii) techniques and procedures used to investigate refraction and total internal reflection of light using ray boxes, including transparent rectangular and semi-circular blocks	
(e) critical angle; $\sin C = \frac{1}{n}$; total internal reflection for light.
