

3.1 Communication

These sections are about waves, images, simple optics and electric circuits. The physics of the imaging and signalling section is approached through how information is gathered, processed, transmitted and presented. Learners have opportunities to develop IT skills through the use of image processing, data capture and data analysis software. The material can be taught using contexts such as smart phones, data streaming, medical scanning and remote sensing. There are opportunities to address human and social concerns, for example, consequences of the growth

of worldwide digital communications (HSW9) and the ethical issues of sharing information (HSW10).

The sensing section covers the ideas involved in understanding electrical circuits, especially charge, current, potential difference, resistance, conductance and potential dividers. Some of this work will be in the context of sensors and instrumentation. There are many opportunities for gaining experimental experience and skills in these sections of the course.
