

Create (AO2)

Creating focuses on the cognitive processes that are associated with creative thought. Creative ideas/products have to be both *novel* and *appropriate* (or functional in design terms). In order to be *novel*, ideas must go beyond clichéd or stereotypical responses-something known as [design] fixation. Recognising fixation and understanding the conceptual processes that help avoid it, is crucial to creative thought. For example, the process of conceptual combination, which is the merging of two or more concepts to form a *novel* idea, which, if *appropriate*, is by definition creative.

Suitable communication and presentation techniques are essential to record and share creative thoughts clearly to a third party. Initially, the focus is on the generation of a wide variety of ideas, using quick methods of communication such as freehand sketching. There is absolutely the freedom for learners to approach their designing in the way they feel most appropriate, e.g. with the use of digital technology or rudimentary models. Working up rough prototypes of ideas using readily available materials

allows evaluation for future iterations. The presentation of later iterations may include techniques such as detailed sketches, more substantive models and photos of models with annotations of technical requirements and general thoughts. Learners' final design solutions can similarly be presented in any medium, but should be drawn with enough skill and detail to show relevant technical details, projections and rendering, resulting in a final prototype(s) that resembles the intended iterative design solution for presentation and evaluation. The final design solution will also be required to be presented through the making of a final functioning and quality prototype(s).

Ideas in the form of sketches, models and annotations as described as part of the 'create' stage should be tested and evaluated as described as part of the 'evaluate' stage. In this way, the learner's creative journey is recorded naturally and clearly communicates their creative and critical thought processes and an understanding of how 'explore', 'create', and 'evaluate' are interrelated.
