

4.5 Equilibria

Knowledge of the concepts introduced in *Unit 2, Topic 2.9: Chemical equilibria* will be assumed and extended in this topic.

Students will be assessed on their ability to:

- a demonstrate an understanding of the term 'dynamic equilibrium' as applied to states of matter, solutions and chemical reactions
- b recall that many important industrial reactions are reversible
- c use practical data to establish the idea that a relationship exists between the equilibrium concentrations of reactants and products which produces the equilibrium constant for a particular reaction, eg data on the hydrogen-iodine equilibrium
