

or Unit 6. They may also appear in the written examination for Unit 5. The core practical codes (eg CP1, CP2 etc) should be used when completing the record card for each student.

Use of examples

Examples in practicals

Where 'eg' follows a type of experiment in the specification students are not expected to have carried out that specific experiment. However they should be able to use data from that or similar experiments.

For instance in this unit, *5.3.1h i Application of redox equilibria*, the specification states:

understand the procedures of the redox titrations below (i and ii) and carry out a redox titration with one:

i potassium manganate(VII), eg the estimation of iron in iron tablets.

Students will be expected to have carried out a redox titration with potassium manganate(VII), but they may or may not have done this to estimate the amount of iron in iron tablets.

In the unit test students could be given experimental data for a potassium manganate(VII) titration, in any context, and be expected to analyse and evaluate this data.

Examples in unit content

Where 'eg' follows a concept students are not expected to have been taught the particular example given in the specification. They should be able to illustrate their answer with an example of their choice.

For instance in this unit, *5.4.2h Organic nitrogen compounds: amines, amides, amino acids and proteins*, the specification states:

comment on the physical properties of polyamides and the solubility in water of the addition polymer poly(ethanol) in terms of hydrogen bonding, eg soluble laundry bags or liquid detergent capsules (liquitabs).

Students will be expected to comment on the physical properties of polyamides and the solubility of poly(ethanol) in terms of hydrogen bonding, but they may or may not have looked at soluble laundry bags or liquitabs.

In the unit test students could be asked to comment on the physical properties of this polyamide and the solubility of the addition polymer in terms of hydrogen bonding. This could be in the context of soluble laundry bags, or in another completely different context.

5.2 Assessment information

Unit 5 examination The examination will be 1 hour 40 minutes and have 90 marks. It will contain three Sections: A, B and C.

Section A is an objective test section which will aim to cover a large proportion of the specification for this unit.

Section B contains a mixture of short-answer and extended answer questions. Questions on the analysis and evaluation of practical work will also be included in Section B.
