

5 Further vectors	5.1	The vector product $\mathbf{a} \times \mathbf{b}$ of two vectors.	To include the interpretation of $ \mathbf{a} \times \mathbf{b} $ as an area.
	5.2	The scalar triple product $\mathbf{a} \cdot \mathbf{b} \times \mathbf{c}$	Students should be able to use the scalar triple product to find the volume of a tetrahedron and a parallelepiped.
	5.3	Applications of vectors to three dimensional geometry involving points, lines and planes.	To include the equation of a line in the form $(\mathbf{r} - \mathbf{a}) \times \mathbf{b} = \mathbf{0}$. Direction ratios and direction cosines of a line.
