

4 Further complex numbers	4.1	Further loci and regions in the Argand diagram.	To include loci such as $ z - a = k z - b $, $\arg \frac{z - a}{z - b} = \beta$ and regions such as $\alpha \leq \arg(z - z_1) \leq \beta$ and $p \leq \operatorname{Re}(z) \leq q$
	4.2	Elementary transformations from the z -plane to the w -plane.	Transformations such as $w = z^2$ and $w = \frac{az + b}{cz + d}$, where $a, b, c, d \in \mathbb{C}$ may be set.
