

2 Allocation (assignment) problems	2.1	Cost matrix reduction.	Students should reduce rows first.
		Use of the Hungarian algorithm to find a least cost allocation.	Ideas of a dummy location is required. The adaption of the algorithm to manage incomplete data is required.
		Modification of the Hungarian algorithm to deal with a maximum profit allocation.	Students should subtract all the values (in the original matrix) from the largest value (in the original matrix).
	2.2	Formulation of the Hungarian algorithm as a linear programming problem.
