

5 Game theory	5.1	Two person zero-sum games and the pay-off matrix.	A pay-off matrix will always be written from the row player's point of view unless directed otherwise.
	5.2	Identification of play safe strategies and stable solutions (saddle points).	Students should be aware that in a zero-sum game there will be a stable solution if and only if the row maximin = the column minimax The proof of the stable solution theorem is not required.
	5.3	Reduction of pay-off matrices using dominance arguments.	
	5.4	Optimal mixed strategies for a game with no stable solution by use of graphical methods for $2 \times n$ or $n \times 2$ games where $n = 1, 2, 3$ or 4	
	5.5	Optimal mixed strategies for a game with no stable solution by converting games to linear programming problems that can be solved by the Simplex algorithm.
