

3.4 The global shift has created winners and losers for people and the physical environment.	a. The movement of the global economic centre of gravity to Asia via the global shift of manufacturing (🌏 China) and outsourcing of services (🌏 India) can lead to benefits (infrastructure investment, waged work, poverty reduction, education and training) but also costs (growing inequalities, loss of productive land, unplanned settlements, environmental and resource pressure). b. Some communities in developing countries have experienced major environmental problems (including air and water pollution, land degradation, over-exploitation of resources, and loss of biodiversity), which impact on people's health and wellbeing. c. Some deindustrialised regions in developed countries face social and environmental problems as a result of economic restructuring (dereliction, contamination, depopulation, crime and high unemployment).
