

## Option 8B: Migration, Identity and Sovereignty

### Overview

Globalisation involves movements of capital, goods and people. Tensions can result between the logic of globalisation, with its growing levels of environmental, social and economic interdependence among people, economies and nation states and the traditional definitions of national sovereignty and territorial integrity. International migration not only changes the ethnic composition of populations but also changes attitudes to national identity. At the same time, nationalist movements have grown in some places challenging dominant models of economic change and redefining ideas of national identity.

Global governance has developed to manage a number of common global issues (environmental, social, political and economic) and has a mixed record in its success in dealing with them. It has promoted growth and political stability for some people in some places whilst not benefiting others. Unequal power relations have tended to lead to unequal environmental, social and economic outcomes.

| Enquiry question 1: What are the impacts of globalisation on international migration?               |                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Key idea                                                                                            | Detailed content                                                                                                                                                                                                                                                                          |
| <b>8B.1</b> Globalisation has led to an increase in migration both within countries and among them. | a. Globalisation has caused extremely significant changes in the global economic system, changing the pattern of demand for labour; this has encouraged both rural-urban migration within countries (🌐 China) and international migration between countries (🌐 EU-Schengen).              |
|                                                                                                     | b. Between 3–4% of the global population live outside their country of birth but this proportion varies greatly between countries because of different policies relating to international migration and levels of engagement with the global economy (🌐 Singapore or Japan or Australia). |
|                                                                                                     | c. The pattern of international migration is changing and will continue to change because environmental, economic and political events affect both the source areas of many migrants and their destinations; this results in flows of economic migrants, refugees and asylum seekers. (1) |

## Enquiry question 1: What are the impacts of globalisation on international migration?

| Key idea                                                                         | Detailed content                                                                                                                                                                                                                                                                   |
|----------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>8B.2</b> The causes of migration are varied, complex and subject to change.   | a. Most migrants move for work or to re-join family members; there are other significant causes, including displacement of refugees due to conflict and poverty in their regions of origin (🌐 migrants crossing the Mediterranean). (2)                                            |
|                                                                                  | b. Economic theory suggests that economic efficiency is maximised when goods (free trade), capital (deregulated financial markets) and labour (open-borders) can move freely across international borders but this poses serious challenges for national identity and sovereignty. |
|                                                                                  | c. The movement of labour is unrestricted within many nation states to ensure efficient allocation of resources (🌐 regional movements in the UK) and the same logic applies for some global regions (EU) but does not yet apply at a global level.                                 |
| <b>8B.3</b> The consequences of international migration are varied and disputed. | a. Migration changes the cultural and ethnic composition of nation states but the integration of migrants varies both between nations and within them.                                                                                                                             |
|                                                                                  | b. Migration causes political tensions because of differences in perceptions of the social, economic, cultural and demographic impacts (🌐 Labour flows across the Mexico-US border and between EU states). (3)                                                                     |
|                                                                                  | c. There are variations in the ability of people to migrate across national borders according to levels of skill and income; and opportunities, including the presence or absence of controls and international borders.                                                           |

**Enquiry question 2: How are nation states defined and how have they evolved in a globalising world?**

| Key idea                                                                                                       | Detailed content                                                                                                                                                                                                                                                                             |
|----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>8B.4</b> Nation states are highly varied and have very different histories.                                 | a. National sovereign states vary greatly in their ethnic, cultural and linguistic unity (🌐 Iceland compared to Singapore); this results from their history of population growth, their degree of isolation and the role of migration. (4)                                                   |
|                                                                                                                | b. Many national borders are a consequence of physical geography and historical development; other borders are a result of colonial history and might not take account of different ethnic or religious groups (🌐 Iraq or Rwanda), which can lead to problems of sovereignty and legitimacy. |
|                                                                                                                | c. There are many contested borders (🌐 Ukraine/Russia) and not all nation states are universally recognised as such (🌐 Taiwan) which can lead to both potential conflict and population movements.                                                                                           |
| <b>8B.5</b> Nationalism has played a role in the development of the modern world.                              | a. 19th-century nationalism was important in the development of empires and a source of conflict in Europe and beyond as other nations became part of larger empires (🌐 British Raj in India).                                                                                               |
|                                                                                                                | b. Since 1945, many new nation states have emerged as European empires disintegrated (🌐 1960s 'wind of change' in Africa); the transition to independence frequently involved conflicts that were costly environmentally, economically and in human terms (🌐 Viet-Nam or Sudan).             |
|                                                                                                                | c. Patterns of migration between former colonies and the imperial core country are still evident and important in changing the ethnic composition and cultural heterogeneity of those countries. (5)                                                                                         |
| <b>8B.6</b> Globalisation has led to the deregulation of capital markets and the emergence of new state forms. | a. Globalisation has encouraged the growth of states that have low-tax regimes which provide havens for the profits for TNCs and homes for wealthy expatriates.                                                                                                                              |
|                                                                                                                | b. Most governments and IGOs have accepted the emergence of tax-havens although many NGOs have raised objections.                                                                                                                                                                            |
|                                                                                                                | c. Growing global inequalities have been recognised as a major threat to the sustainability of the global economic system and some governments have promoted alternative models (🌐 Bolivia or Ecuador). (6)                                                                                  |

**Enquiry question 3: What are the impacts of global organisations on managing global issues and conflicts?**

| Key idea                                                                                                              | Detailed content                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>8B.7</b> Global organisations are not new but have been important in the post-1945 world.                          | a. The United Nations was the first post-war IGO to be established and has grown in importance; its role in global governance is affected by the different geopolitical visions of members of the Security Council and its multiple functions in managing global environmental, socio-economic and political problems. |
|                                                                                                                       | b. Interventions by the UN through the use of economic sanctions and direct military intervention have been made in defence of human rights but have a mixed record of success. (🌐 Trade Embargo Iran or UN forces in Congo).                                                                                          |
|                                                                                                                       | c. Some member states (US, UK) have operated independently of the UN in intervening in countries labelled as 'fragile states' or to conduct a 'war on terror' with profound impacts on geopolitical relations and global stability.                                                                                    |
| <b>8B.8</b> IGOs established after the Second World War have controlled the rules of world trade and financial flows. | a. The IMF, WB and WTO were established by the WWII allied nations and have been important in maintaining the dominance of 'western' capitalism, global economic management and trade policy (free trade).                                                                                                             |
|                                                                                                                       | b. Global borrowing rules and trade policies have been especially effective in delivering growth to the developed world, but the impact of Structural Adjustment and HIPC policies on the developing world's economies and economic sovereignty is disputed (🌐 Jamaica's structural adjustment programme).             |
|                                                                                                                       | c. Membership of global trade and financial IGOs is almost universal, as a result of the dominance of these organisations, but regional groupings have emerged in the form of trading blocs (🌐 NAFTA/SEATO) and in some cases (EU) there has been a movement to closer political unity.                                |
| <b>8B.9</b> IGOs have been formed to manage the environmental problems facing the world, with varying success.        | a. Global environmental issues including issues concerning the quality of the atmosphere and biosphere (🌐 Montreal Protocol on Substances that Deplete the Ozone Layer) and biosphere (🌐 Convention on International Trade in Endangered Species of Wild Fauna and Flora CITES). (7)                                   |
|                                                                                                                       | b. IGOs have been involved in developing laws for managing oceans (🌐 UN Convention on the Law of the Sea) and international rivers (🌐 Helsinki Water Convention rules) as well as monitoring the state of the environment (🌐 Millennium Ecosystem Assessment).                                                         |
|                                                                                                                       | c. IGO management also includes responsibility for Antarctica as a continent of peace and science (🌐 Antarctic Treaty System).                                                                                                                                                                                         |

### Enquiry question 4: What are the threats to national sovereignty in a more globalised world?

| Key idea                                                            | Detailed content                                                                                                                                                                                                                                                                |
|---------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>8B.10</b> National identity is an elusive and contested concept. | a. Nationalism remains a powerful force; it is reinforced through education, sport and by political parties stressing loyalty to both the institutions and the ideals of nation states.                                                                                         |
|                                                                     | b. Identity and loyalty has historically been tied to distinctive legal systems, methods of governance, national 'character' or even a landscape (🌐 The English Countryside).                                                                                                   |
|                                                                     | c. Most countries are multi-national with many contrasting ethnic groups; questions of national identity and loyalties are therefore complex, especially in an era of globalisation.                                                                                            |
| <b>8B.11</b> There are challenges to national identity.             | a. Many UK-based companies are foreign owned (🌐 EDF or Jaguar Land Rover (JLR)), making 'Made in Britain' an increasingly complex idea. (8)                                                                                                                                     |
|                                                                     | b. 'Westernisation' is often dominated by US cultural values through the operation of large corporations in both retailing and entertainment; this, in turn, promotes a distinctive view of the benefits the dominant capitalist model.                                         |
|                                                                     | c. Ownership of property, land and businesses in countries is increasingly non-national (🌐 Qatari and Russian property in London and US or Indian or Chinese ownership of TNCs), which impacts on national identity. (9)                                                        |
| <b>8B.12</b> There are consequences of disunity within nations.     | a. There are strong nationalist movements seeking to create independent, smaller states whilst remaining within larger trading groups (🌐 Catalonia or Scotland in the EU).                                                                                                      |
|                                                                     | b. There are significant political tensions in the BRIC and other emerging nations resulting from the uneven pattern of the costs and benefits of globalisation.                                                                                                                |
|                                                                     | c. The role of the state is variable and national identity is not always strong, especially in 'fragile states' where there are stark differences between the politically and economically powerful elite, foreign investment groups and the wider population (🌐 Somalia). (10) |

### **Guidance for integrating geographical skills for Topic 8 Option 8B**

Students must use both quantitative and qualitative skills in this topic. The following guidance on integrating geographical skills gives suggestions for opportunities to meet these requirements.

These skills are **not** exclusive to the topic areas under which they appear; students will need to be able to apply these skills across any suitable topic area throughout their course of study. *Appendix 1* outlines the full range of geographical skills.

- (1) Use of flow-lines on global maps showing flows, both the direction and number of migrants among global regions.
- (2) Interpreting oral accounts from migrants to investigate the cause of migration.
- (3) Interpreting a range of opinions on the contribution of migrants to the culture and social life of two contrasting nations.
- (4) Use of divided bar graphs to compare the ethnic diversity of countries.
- (5) Comparison of global maps of languages and colonial histories to analyse relationship between them (Anglophone, Francophone and Lusophone).
- (6) Using the Gini coefficient and income/wealth proportions for deciles of the population to describe inequalities within and between nation states.
- (7) Evaluating source material, including newspaper articles, to determine the impact of IGOs managing global environmental issues.
- (8) Use of proportional circles to show size of output and level of foreign ownership of different economic sectors.
- (9) Critical analysis of a variety of source material to identify possible reasons for errors in the assessment of the costs and benefits of foreign ownership (property land and businesses).
- (10) Critical analysis of source material to identify possible misuse of data in the assessment of role of the state and the success in promoting national identity.

# Fieldwork

---

## Overview

Students are required to complete a minimum of **four** days of fieldwork.

This fieldwork must relate to processes in **both** physical and human geography. It must also provide an introduction to the nature and process of a high-quality geographical enquiry.

Full details of the required fieldwork skills are provided in *Appendix 2: Fieldwork skills*.

## Fieldwork statement

Centres will be required to provide evidence of this fieldwork (which can include days undertaken as part of a separate AS Level in Geography) in the form of a written fieldwork statement. See *Appendix 8: Fieldwork statement*.

Pearson will publish the final deadline date for submission of this form on our website each year. Failure to return the fieldwork statement on time will constitute malpractice on the part of the centre.

## Relationship between the fieldwork and the independent investigation

The fieldwork will enable students to develop skills that they can use in their independent investigation.

Students may, but are not required, to use data collected in their four days' fieldwork as part of their independent investigation. However, it is also possible to carry out the independent investigation on a separate topic with new data collected.

# Non-examination assessment: Independent Investigation

---

## Overview

The purpose of this non-examination assessment is to test students' skills in independent investigation. Students are required to undertake an independent investigation that involves (but which need not be restricted to) fieldwork. The focus of the investigation must be derived from the specification the student is studying. The guidance for word length is 3000-4000 words.

The student defines a question or issue relating to the compulsory or optional content. The student's investigation will incorporate fieldwork data (collected individually or as part of a group) and own research and/or secondary data. The student's report will evidence independent analysis and evaluation of data, presentation of data findings and extended writing.

## Content

The independent investigation may relate to human or physical geography or it may integrate them.

The independent investigation must:

- be based on a question or issue defined and developed by the student individually to address aims, questions and/or hypotheses relating to any of the compulsory or optional content
- incorporate field data and/or evidence from field investigations, collected individually or in groups
- draw on the student's own research, including their own field data and, if relevant, secondary data sourced by the student
- require the student independently to contextualise, analyse and summarise findings and data
- involve the individual drawing of conclusions and their communication by means of extended writing and the presentation of relevant data.

The table below shows a suitable A Level Geography route to enquiry that forms the student's independent investigation.

| Stage                                                                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Purpose, identification of a suitable question/aim/hypothesis and developing a focus   | Identify appropriate field research questions/aims/hypotheses, based on their knowledge and understanding of relevant aspects of physical and/or human geography. Research the relevant literature sources linked to possible fieldwork opportunities presented by the environment, considering their practicality and relationship to compulsory and optional content. Understand the nature of the current literature research relevant to the focus. This should be clearly and appropriately referenced within the written report. |
| Designing the fieldwork methodologies, research and selection of appropriate equipment | Consideration of how to observe and record phenomena in the field and to design appropriate data-collection strategies taking account of sampling and the frequency and timing of observation. Demonstrate knowledge and understanding of how to select practical field methodologies (primary) appropriate to their investigation (may include a combination of qualitative and quantitative techniques).                                                                                                                             |
| Information collation and data representation and analysis                             | Know how to use an appropriate diagrams, graphs and maps, and using geospatial technologies to select and present relevant aspects of the investigation outcomes.                                                                                                                                                                                                                                                                                                                                                                      |
| Analysis and explanation of information                                                | Use techniques appropriate for analysing field data and research information. Demonstrate the ability to write a coherent analysis of fieldwork findings and results linked to a specific geographical focus.                                                                                                                                                                                                                                                                                                                          |
| Conclusions and critical reflection on methods and results                             | Use knowledge and understanding to interrogate and interpret meaning from their investigation (theory, concepts, comparisons), through the significance of conclusions. Demonstrate the ability to interrogate and critically examine field data (including any measurement errors) in order to comment on its accuracy and/or the extent to which it is representative and reliable.                                                                                                                                                  |
| Recognising the wider geographical context                                             | Explain how the results relate to the wider geographical context and use the experience to extend geographical understanding. Show an understanding of the ethical dimensions of field research.                                                                                                                                                                                                                                                                                                                                       |

Learning hours for the independent investigation are not specified because the process of producing the report is iterative and undertaken independently.

The independent investigation report may be completed at school/college, or at home (or other location outside school/college), or at a combination of both.

## Independent Investigation controls relating to student independence and teacher guidance to students

The rationale for the following rules is given in *Appendix 13*.

### Guidance permitted at different stages:

- Investigation title stage (guidance and approval)
- Planning and investigation stage (guidance and approval)

### Teachers:

#### Can:

- provide broad parameters for candidates' investigation proposals (including themes from the specification, locations, availability of equipment, time constraints);
- explain what independence means (see table in Appendix 6).
- advise on health and safety considerations, the use of equipment and potential ethical concerns.
- discuss with candidates their initial exploratory planning and tentative investigation titles.

#### Must:

- confirm that the provisional title has the potential to meet the assessment criteria and offer general guidance on any necessary amendments.
- review each candidate's Geography Independent Investigation Form. Within this review teachers should ensure that the proposed investigation can suitably access the specification requirements and give general guidance on the methodology and analytical tools that the candidate plans to use.
- promote good practice such as referencing and using a bibliography system.
- store work securely once it is handed in for formal assessment.

#### Must not<sup>2</sup>:

- provide candidates with a choice of titles or tasks from which candidates then choose.
- give detailed feedback to individual candidates about how to improve work to meet the assessment criteria. The guidance provided prior to final submission should only enable candidates to take the initiative in making amendments, rather than detailing what amendments should be made. This means that teachers must not provide templates and model answers for the work of specific candidates.
- mark work provisionally and share that mark so that the candidate may then improve it.
- return work to candidates after it has been submitted and marked.
- give guidance on how to make improvements to the draft in order to meet the assessment criteria so that candidates are no longer engaged in independent learning.

---

<sup>2</sup> This section applies also to third party fieldwork providers. Teachers must ensure that at all times they remain confident in the authenticity and independence of the candidate's work.

**If teachers give any assistance which goes beyond general advice, for example<sup>3</sup>:**

- provide detailed specific guidance on how to improve drafts to meet the assessment criteria;
- give detailed specific guidance on errors and omissions which limits candidates' opportunities to show initiative themselves;
- intervene personally to improve the presentation or content of work;
- provide primary or secondary data not collected by the candidate either individually or as part of a group

then they must record this assistance and take it into account when marking the work.

Annotation should be used to explain how marks were applied in the context of the additional assistance given.

If teachers and/or third party fieldwork providers give specific guidance which goes beyond general guidance and do not take it into account when marking the work, or record it, this will be considered as malpractice. If malpractice is suspected, the Awarding Organisation will investigate. If malpractice is found to have taken place a penalty will be applied dependent on the circumstances and severity of the malpractice.

For full information regarding malpractice please see the JCQ document 'Suspected Malpractice in Examinations and Assessments'.

Examples of specific guidance and general guidance are given in *Appendix 14*, page 117. These examples are not exhaustive.

**Description of the level of independence at each stage of the investigation**

*Appendix 6* gives descriptions which, although they do not infer anything in the way of marks allocated for each stage of the investigation, are to specify the level of independence required at different stages.

Note that the level of independence at each stage is the minimum required (i.e. where collaboration is allowed it is not mandatory and candidates may work alone).

Levels of independence:

- Collaboration allowed - candidates may work as a class/group/pair,
- Independent work – candidates must work alone

If candidates collaborate (where independence is expected) and/or are given assistance beyond the parameters indicated in the table below, then the teacher must record this on the Geography Independent Investigation Form and take it into account when marking the work. Failure to do so will be considered as malpractice. If malpractice is suspected the Awarding Organisation will investigate. If malpractice is found to have taken place a penalty will be given dependent on the circumstances and severity of the malpractice.

For full information regarding malpractice please see the JCQ document 'Suspected Malpractice in Examinations and Assessments'.

**Health and safety**

All centres must comply with the new requirements (2011) of relevant legislation and codes of practice, including the Department for Education health and safety guidance for schools ([www.education.gov.uk/schools/adminandfinance/healthandsafety](http://www.education.gov.uk/schools/adminandfinance/healthandsafety)) and the Health and Safety Executive – School trips and outdoor learning activities ([www.hse.gov.uk/services/education/school-trips.pdf](http://www.hse.gov.uk/services/education/school-trips.pdf)).

---

<sup>3</sup> First three bullet points as per the JCQ *Instructions for conducting non-examination assessment*, section 4.2.

Centres should also develop their own mechanisms so that students know the importance of ensuring their own safety and that of others. This could include developing risk assessments as part of the preparation for fieldwork, for example by using Google Maps and Google StreetView to assess likely hazards and risk. Students who might be lone working should be provided with additional information and guidance and the centre must have suitable policies and procedures for lone working.

### **Resources**

Students must have equal access to IT resources. Students should have access to a range of resources, literature and texts to enable them to make choices as required for their research task.

### **Storing students' work**

Where students are completing the assignment over a number of sessions, at the end of each session their work must be saved and kept securely.

### **Word count**

It is recommended that students write between 3000 and 4000 words for their independent investigation. Students will not be specifically penalised on the basis of the length of their written report. However, excessively high or low word counts may restrict students' ability to evidence the skills outlined in the marking criteria. Students must sign the candidate declaration in both the Geography independent investigation form (*Appendix 5*) and Mark sheet (*Appendix 7*).

### **Submission of the independent investigation report**

The student's completed individual investigation report should be submitted to Pearson. The original Non-examination assessment Authentication Sheet must be included.

### **Independent Investigation plan guidance service**

Pearson provides a free student planning guidance service. Please see our website for further details.

## Assessment, internal standardisation and moderation

Candidates' investigations must be internally-assessed by centres, annotated to indicate how and why marks have been awarded, and internally-standardised, following the procedures specified in section 6.1 and 6.2 of the JCQ Instructions for conducting non-exam assessments. The independent investigation is then externally moderated. There is a maximum of 70 marks available for the independent investigation. Teachers should mark the independent investigation using the assessment criteria on the following pages. Teachers may annotate students' work but should also include any comments on the *Geography independent investigation form* (see Appendix 5) to justify the marks awarded.

Where marking has been carried out by more than one teacher in a centre, there must be a process of internal standardisation carried out to ensure that there is a consistent application of the assessment criteria.

Marks awarded by the centre will be subject to external moderation by Pearson. Moderation will ensure consistency with national standards and will include a review of assignments to ensure that the assignment-setting rules have been correctly applied by centres. Pearson will notify centres of the students whose work has been selected for moderation. This sample will take cohort size into account.

If the moderation indicates that centre assessment does not reflect national standards, an adjustment will be made to students' final marks to compensate.

For further information please refer to the Joint Council for Qualifications (JCQ) *Instructions for Conducting Non-examined Assessments* on the JCQ website: [www.jcq.org.uk](http://www.jcq.org.uk). The assessment of this qualification must comply with these instructions.

## Non-examination assessment: assessment criteria

Teachers must mark students' work using the following assessment criteria.

### Marking guidance

- All students must receive the same treatment. Teachers must mark the last student in exactly the same way as they mark the first.
- The assessment criteria descriptors should be used to assess which mark range students work best fits. When this has been determined, a decision must be taken on whether the work is placed at the 'bottom', 'middle' or 'top' of this mark range. A mark can then be confidently awarded.
- Mark schemes should be applied positively. Students must be rewarded for what they have shown they can do rather than be penalised for omissions.
- All the marks on the mark scheme are designed to be awarded. Teachers should always award full marks if deserved, i.e. if the answer matches the mark scheme. Teachers should be prepared to award zero marks if the student's response is not worthy of credit according to the mark scheme.
- Centres must internally moderate and cross-standardise work to ensure fairness, accuracy and reliability.

|                |             | <b>Purpose of the Independent Investigation<br/>(12 marks)<br/>(AO1: 4 marks, AO2: 4 marks and AO 3: 4 marks)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <b>Level 3</b> | 13–18 | <ul style="list-style-type: none"> <li>• Demonstrates mostly accurate and relevant geographical knowledge and understanding of location, geographical theory and comparative context. (AO1)</li> <li>• Applies understanding to find largely coherent and relevant links between the investigation's conclusions and a broader geographical context. (AO2)</li> <li>• Synthesises most aspects of the research findings in a largely coherent manner. (AO3)</li> <li>• Provides a mainly appropriate appraisal of the reliability of evidence and validity of conclusions. (AO3)</li> <li>• A developed argument which considers a relevant selection of factors in an uneven manner and which is expressed through logical lines of reasoning that are clear, but not fully developed and demonstrates a use of an appropriately structured enquiry process. Uses mostly accurate geographical terminology.(AO3)</li> <li>• Conclusions are mostly supported by drawing together a selection of mostly relevant evidence and concepts linked to the investigation. (AO3)</li> </ul> |
| <b>Level 4</b> | 19–24 | <ul style="list-style-type: none"> <li>• Demonstrates accurate and relevant geographical knowledge and understanding of location, geographical theory and comparative context throughout. (AO1)</li> <li>• Applies understanding to find coherent and relevant links between the investigation's conclusions and a broader geographical context. (AO2)</li> <li>• Synthesises research findings coherently and comprehensively. (AO3)</li> <li>• Provides a balanced appraisal of the reliability of evidence and validity of conclusions. (AO3)</li> <li>• A balanced and concise, well-developed argument is expressed through sustained logical lines of reasoning that demonstrates use of a structured and comprehensive enquiry process. Uses accurate geographical terminology throughout. (AO3)</li> <li>• Convincing conclusions that are fully supported by drawing together a selection of relevant evidence and concepts linked to the entire purpose of the investigation. (AO3)</li> </ul>                                                                             |

## Geography Independent Investigation form

All sections of the form in *Appendix 5* must be completed by candidate and teacher and the form must be attached to the work submitted for moderation. The forms may also be subject to inspection by a JCQ Centre Inspector. (Some JCQ inspections are targeted at centres with statistically atypical results in internal assessments.) Any suspected instances of malpractice will be reported to the Awarding Organisation for further investigation. If malpractice is found to have taken place a penalty will be given dependent on the circumstances and severity of the malpractice.

For full information regarding malpractice please see the JCQ document 'Suspected Malpractice in Examinations and Assessments'.

### 1. Candidate/teacher authentication section

Centres must ensure that the candidate authentication section is completed for each candidate by both the candidate and teacher. The form requires the following details (as per section 4.6 of the JCQ Instructions).

Candidates must sign a declaration to confirm that, apart from collaboration with other candidates and general guidance from the teacher, where these are acceptable within the parameters of the specification, the work which they submit for final assessment is their own unaided work.

Teachers must sign a declaration of authentication after the work has been completed confirming that:

- o any assistance which goes beyond general guidance has been recorded and taken into account when marking the work;
- o otherwise, apart from general guidance given in line with the parameters set out in the specification, the work is solely that of the candidate concerned;
- o the work was completed under the required conditions;
- o signed candidate declarations are kept on file.

Teachers should be sufficiently familiar with the candidate's general standard to judge whether the piece of work submitted is within his/her capabilities, and there should be sufficient supervision of every candidate to enable the work to be authenticated with confidence. Work may be completed outside of the centre, without supervision, provided that the centre is confident that the work produced is the candidate's own.

The forms, containing the signed candidate declarations, must be kept on file until the deadline for an enquiry about results has passed or until any appeal, malpractice or other results enquiry has been completed, whichever is later.

### 2. Investigation proposal section

Candidates use this section to detail their title, hypotheses and/or questions and/or sub-questions, enquiry route, suggested methods of data collection and suggestions of analytical tools.

### Missing or incomplete Independent Investigation Forms

The remainder of this document should be read in conjunction with section 9 of the JCQ Instructions for conducting non-examination assessment.

If a Geography Independent Investigation form is found to be missing or incomplete, the Awarding Organisation will in the first instance contact the centre to rectify the matter. If this request is not addressed satisfactorily, the Awarding Organisation will take further action, which may lead to a malpractice investigation.

## Mark sheet

Teachers complete this form when they mark the work, providing a mark breakdown and any supporting information in accordance with the Awarding Organisation's normal procedures.

## Detecting malpractice

Malpractice may be suspected by teachers in work as follows:

- the style of writing is not typical of the candidate; it might be from published material, or from another person
- there are instances of the same errors in the work of two or more candidates
- there are passages quoted from publications or the internet which are not acknowledged in the bibliography or by in-text referencing
- there are passages copied from examples of good practice which were distributed to the whole class
- the work of one candidate is copied from another.

## Dealing with malpractice

By centres:

- If the centre/teacher suspects some form of malpractice, the centre must take action to investigate internally. The centre should have in place procedures to deal with these issues across qualifications.
- The candidate and teacher should only complete the authentication section of the Geography Independent Investigation form once it is clear which parts of the work are the candidate's own. If the matter is not resolved the candidate should be awarded zero.

## Consequences of malpractice

If malpractice is suspected the Awarding Organisation will investigate. If malpractice is found to have taken place a penalty will be given dependent on the circumstances and severity of the malpractice.

For full information regarding malpractice please see the JCQ document 'Suspected Malpractice in Examinations and Assessments'.

## Security and backups

It is the centre's responsibility to keep the work that students have submitted for assessment secure.

Secure storage is defined as a securely-locked cabinet or cupboard. Where students are producing artefacts, secure storage is defined as a classroom studio or workshop that is locked or supervised from the end of one session to the start of the next.

The rules on storage also apply to electronic data. For example, centres should collect memory sticks for secure storage between sessions or restrict student access to specific areas of the centre's IT network.

For materials stored electronically, centres are strongly advised to utilise firewall protection and virus-checking software, and to employ an effective backup strategy, so that an up-to-date archive of students' evidence is maintained.

## Further information

For up-to-date advice on teacher involvement and administration of non-examination assessment, please refer to the Joint Council for Qualifications (JCQ) document *GCE, ELC and Project qualifications – Instructions for Conducting Non-examined Assessments*, available on the JCQ website: [www.jcq.org.uk](http://www.jcq.org.uk)

### 3 Assessment information

**Paper 1 (Paper code: 9GE0/01)**

- First assessment: May/June 2018.
- The assessment is 2 hours and 15 minutes.
- The assessment is out of 105 marks.
- The assessment consists of three sections.
- **Section A:** students must answer **all** questions.
- **Section B:** students answer **either** Question 2 (*Glaciated Landscapes and Change*) **or** Question 3 (*Coastal Landscapes and Change*) in Section B.
- **Section C:** students must answer **all** questions.
- The paper may include short open, open response, calculations and resource-linked questions. The examination includes 12-mark and 20-mark extended writing questions.
- Calculators may be used in the examination.

**Content assessed**

- **Section A** assesses Area of study 1, Topic 1: Tectonic Processes and Hazards.
  - **Section B** assesses Area of study 1, Topic 2: Landscape Systems, Processes and Change. This includes **two** optional sub-topics from which students choose **one**:  
*2A Glaciated Landscapes and Change or 2B Coastal Landscapes and Change.*
  - **Section C** assesses Area of study 3, Topic 5: The Water Cycle and Water Insecurity and Topic 6: The Carbon Cycle and Energy Security.
-
