

Task 4.1 — Development Plan (AO1, AO2, AO3)	
Mark band 2 (10–18)	The student has produced a development plan of a moderate standard. The aim (or aims) may be clear and may be appropriate to the student's chosen role of the performer, leader or official. The development plan has largely been constructed using simple physiological, technical or psychological principles and the research has not been fully referenced. The level of planning is sound in its detail. The development plan, while demanding, may not have been completed by the student. The period of time may not have been suitable, and there may be some absences. The student will probably have used simple methodologies and may not be aware of alternative scientific equipment and cutting-edge methods, technology and training equipment. The student will have been able to offer to their centre staff only a simple level of insight as to their outcomes and the effect these have had on progressing their chosen role beyond the written limits of the plan. The selection of appropriate methodologies in order to validate the effectiveness of the development plan may not have been undertaken in an applied manner with more suitable alternatives possible. The development plan lacks full references, with no clear indications as to the effect this has had on progressing their own performance role. The development plan, if repeated, will need modifications and the evaluation contains little or no critical comment. On completion, the student has, been able to demonstrate a basic level of knowledge and understanding of the demands of their performance role. The plan may not contain a bibliography.
Mark Band 1 (1–9)	The student has produced a development plan of a limited standard. The aim (or aims) may be clear and may be appropriate to the student's chosen role of the performer, leader or official. The development plan has largely been constructed using simple physiological, technical or psychological principles and the research has not been referenced. The level of planning is very simplistic in its detail and will not be fully appropriate. The development plan lacks demand and may not have been completed by the student, with some absences seen over what may not have been a suitable period of time. The student will have used only simple methodologies and may not be aware of alternative scientific equipment and cutting-edge methods, technology and training equipment. The student will have been able to offer to their centre staff no clear insight into their outcomes and the effect these have had on progressing their chosen role, beyond the written limits of the plan. The selection of appropriate methodologies in order to validate the effectiveness of the development plan will not have been undertaken in an applied manner, with more suitable alternatives possible. The development plan lacks references, with no clear indications as to the effect this has had on progressing the student's performance role. The development plan if repeated will need modifications and the evaluation contains no critical comment. On completion, the student has been able to demonstrate a very basic level of knowledge and understanding of the demands of their performance role. The plan may not contain a bibliography.

Calculation of marks for Task 4.1 — Development Plan

For *Task 4.1: Development Plan* students complete the three stated components; this task has a total mark of 45. This mark can be calculated by marking each component, using the criteria above, and adding the three marks together, achieving a final mark out of 45. The holistic criteria above should be used to check the final mark.
