

Task 4.1 — Development Plan (AO1, AO2, AO3) Component 2 — Performing and Recording	
Mark Band 5 (17–20)	The student followed the development plan as it is set out to a very high standard and has attended the outlined sessions, including performing a correct warm-up and cool-down on each occasion, where appropriate. The student works safely, whether supervised or not. The plan has been accurately recorded and the student can work independently and/or support others where applicable. The recording of the plan is extensive and accurate in detail and incorporates the scientific, technical or psychological details that support the fundamental aim(s) of the plan. The student is able to offer extensive verbal evidence of their knowledge and understanding. All the testing, monitoring and data collection were appropriate and reflect current trends and initiatives.
Mark Band 4 (13–16)	The student followed the development plan as it is set out to a high standard and attended the outlined session on a regular basis, including performing a correct warm-up and cool-down on most, if not all, occasions, where appropriate. The student works safely, whether supervised or not. The plan generally has been recorded accurately with few errors and the student has shown some ability to work independently and/or support others where applicable. The recording of the plan is accurate in detail and incorporates the scientific, technical or psychological details that support the fundamental aim(s) of the plan. The student is able to give very good verbal evidence of their knowledge and understanding. All the testing, monitoring and data collection were appropriate and have, in the main, reflected current trends and initiatives.
Mark Band 3 (9–12)	The student followed the development plan as it is set to a good standard. The student has attended most of the outlined sessions, while not always performing a correct warm-up and cool-down, where appropriate. The student works safely, whether supervised or not. The plan has been generally recorded accurately with few errors. The student has shown some ability to work independently and/or support others where applicable. The plan has been recorded reasonably accurately, but has included only very general scientific, technical or psychological detail which supports the fundamental aim(s) of the plan. The student is able to give good verbal evidence of their knowledge and understanding, though there may be some clear gaps evident. The testing, monitoring and data collection were generally appropriate and the student has made some attempt to reflect current trends and initiatives.
Mark Band 2 (5–8)	The student may have followed the development plan as it is set to a moderate standard. The student has attended the outlined sessions infrequently and rarely performed a correct warm-up and cool-down, where appropriate. The student can work safely but normally only under supervision. The plan generally has been recorded accurately with few errors and the student has shown some ability to work independently and/or support others where applicable. The recording of the plan has not been accurate in its detail and fails to fully incorporate the scientific, technical or psychological detail which supports the fundamental aim(s) of the plan. The student is unable to give good verbal evidence of their knowledge and understanding, and there may be some clear gaps evident. The testing, monitoring and data collection are generally inconsistent and the student has made a limited, if any, attempt to reflect current trends and initiatives.
Mark Band 1 (1–4)	The student has not followed the development plan as it is set and has worked to a limited standard. The student has attended infrequently the outlined session and fails to perform a correct warm-up and cool-down, where appropriate. The student cannot usually work safely and requires supervision. The plan has not been recorded accurately and contains many errors and the student has shown little ability to work independently and/or support others where applicable. The plan is inaccurate in its detail and contains major errors. It fails to incorporate the scientific, technical or psychological details that support the fundamental aim(s) of the plan. The student is unable to give any verbal evidence of their knowledge and understanding. The testing, monitoring and data collection are inconsistent and the student has failed to reflect current trends and initiatives.
