

2.4 Linear motion	2.4.1 Knowledge and understanding of the factors associated with linear motion and the application of definitions, equations, calculations and units of measurement in a sporting context.
	2.4.2 Calculation of the distance and displacement, speed and average speed, velocity and acceleration. Speed = distance/time ($s = d/t$) Velocity = displacement/time or distance/time (m/s) Acceleration = (final velocity – initial velocity)/time taken (m/s^2)
	2.4.3 Plot, label and interpret graphs of motion. To include distance/time, speed/time graphs and velocity/time graphs.
