

7.5 Practical investigation	7.5.1 One practical research exercise to gather data relevant to topics covered in child psychology. This practical research exercise must adhere to ethical principles in both content and intention.
	In conducting the practical research exercise, students must: • conduct one study using a questionnaire, interview or observation • gather qualitative and/or quantitative data but must involve quantitative data for analysis (can turn qualitative data into quantitative data for analysis purposes) • include inferential statistical testing as appropriate, such as chi squared, Mann-Whitney U, Wilcoxon or Spearman's rho • include a research question/hypothesis, research method, sampling, ethical considerations, data collection tools, data analysis, results, discussion • consider strengths and weaknesses of the practical research exercise and possible improvements.
	Suitable examples • Interview of an adult to look for a relationship between strong attachment experiences and strong adult relationships. • Interview of a parent of a child under 3 years old around positive experiences when using day care for their child.
