

17 Paired tests

Subject content	Additional information
17.1 Use sign, Wilcoxon signed-rank or paired t -test, understanding appropriate test selection and interpreting the results in context.	Students will be expected to use the sign and Wilcoxon signed-ranked tests for paired data. Students will be expected to learn and recall necessary conditions for the validity of these tests, and may be required to use these to select the test that is most appropriate in a given context. Sign test – no assumption necessary regarding the distribution for test to be valid. Wilcoxon signed-rank test – assumption that the distribution of differences is symmetrical for test to be valid. Paired t-test – assumption required is that the distribution of differences is normal for test to be valid.
